

-At the area of the nozzle gate, hardened steel (52+2/-1) is recommended by Manner.
-Manner recommend that the sealing surface $\varnothing 8$ is manufactured by grinding and not EDM with a surface quality of $Rz\ 1$.
-Machine the gate hole after the hardening to avoid excessive quench in the thin section during heat treat & resulting overhardening in the gate.

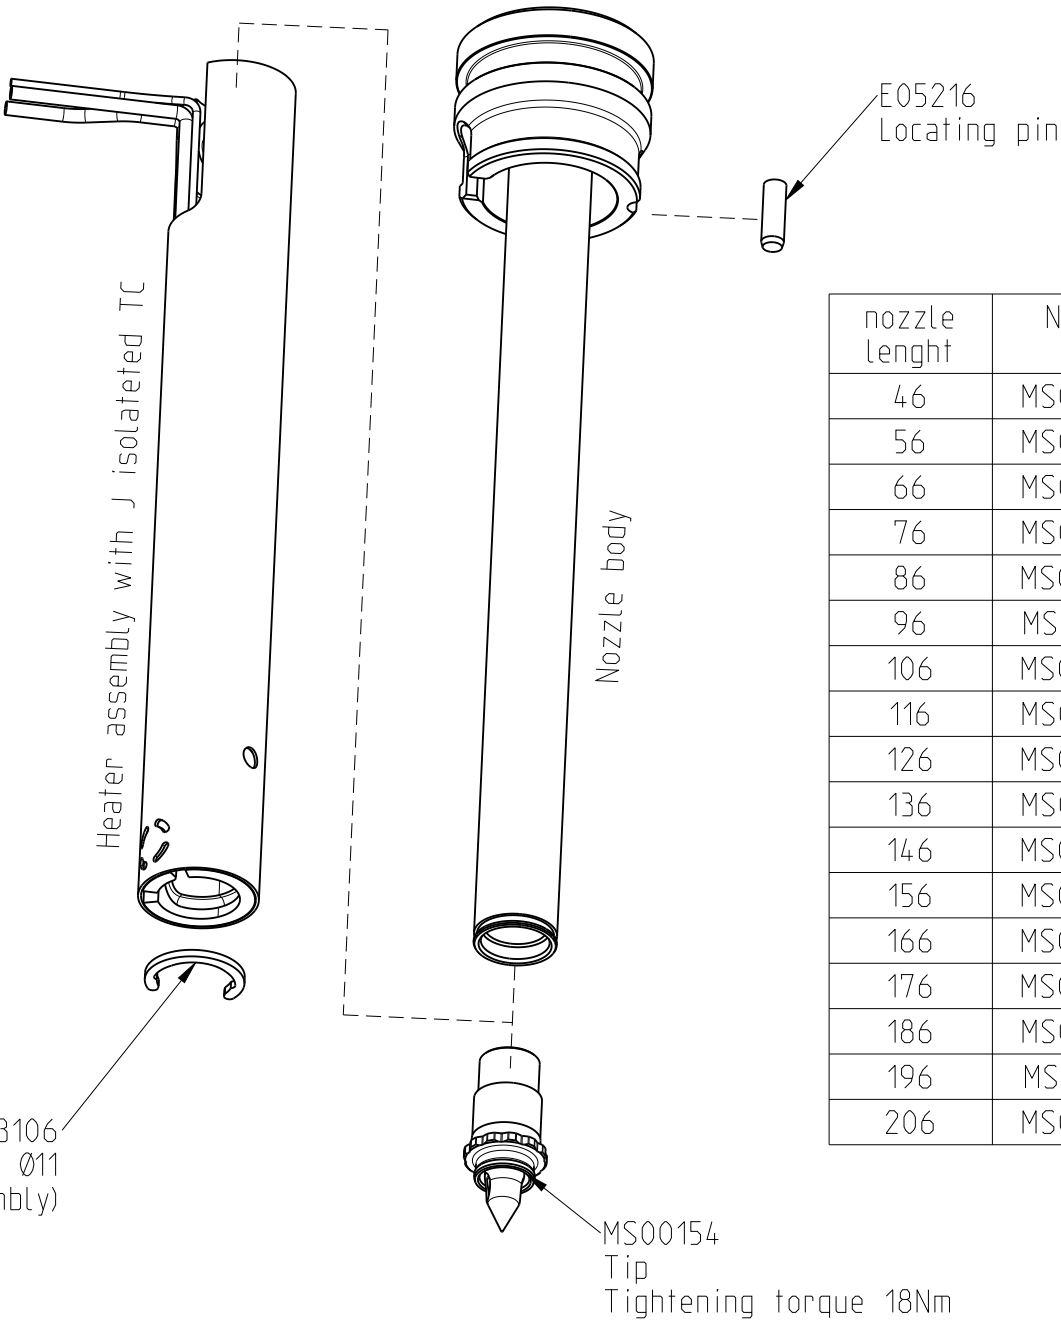

Gate diameter is approximate and could vary depending on injected volume and part wall thickness
